# Data Evaluation

Imagine you have collected data...

- For a single interview, drawing conclusions might be easy
- What if you have a lot of data?
  - Quantitative data from a lot of surveys/observations
  - Qualitative data from multiple detailed observations or long interviews

# Quantitative Data Evaluation

- Usually using some form of statistics
  - Way too much to cover here!
- **Goal:** try to extract cause → effect relationships
- **Be cautious when complex statistics are reduced to extremely simple results!**

Does drinking Coca Cola cause cancer? Give only a simple yes/no answer without any further justification.

Yes.

Does drinking Pepsi cause cancer? Give only a simple yes/no answer without any further justification.

No.

# Qualitative Data Evaluation

- **Goal:** try to identify patterns/themes
- Typical first step: **Qualitative Coding**
  - You try to capture the “main idea” of what a person did/said
- Next step: categorize/summarize codes
  - There are many different styles how to do this
- Usually needs a fair amount of subjective judgement
  - How can you avoid bias?

# Beyond Data: Cognitive Dimensions

Mass = 10000

Fuel = 50

Force = 400000

Gravity = 32

WHILE Vdist >= 0

IF Tim = 11 THEN Angle = .3941

IF Tim > 100 THEN Force = 0 ELSE Mass = Mass - Fuel

Vaccel = Force \* COS(Angle) / Mass - Gravity

Vveloc = Vveloc + Vaccel

Vdist = Vdist + Vveloc

Haccel = Force \* SIN(Angle) / Mass

Hveloc = Hveloc + Haccel

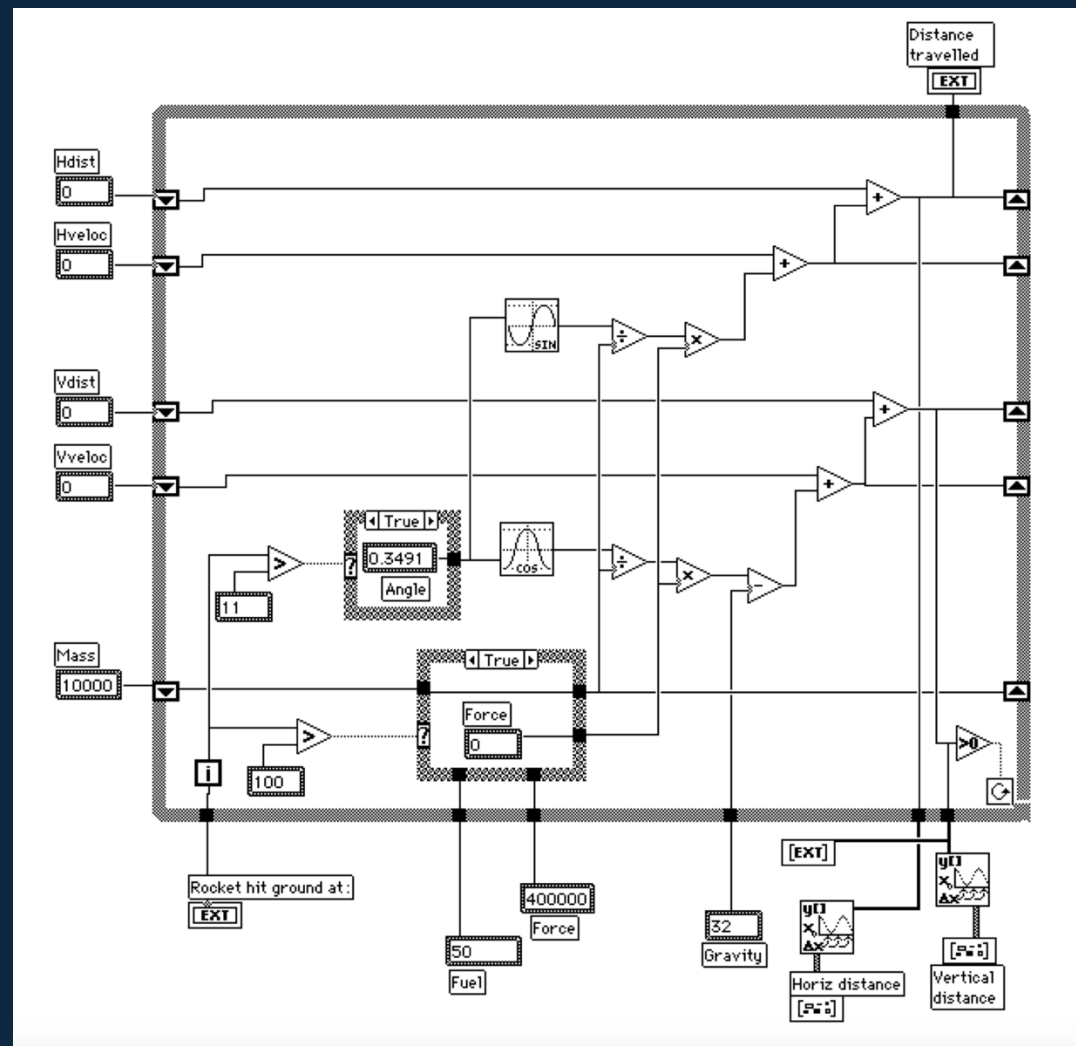

Hdist = Hdist + Hveloc

PRINT Tim, Vdist, Hdist

Tim = Tim + 1

WEND

STOP

### Advanced Search

Find pages with...

all these words:

this exact word or phrase:

any of these words:

none of these words:

numbers ranging from:

to

To do this in the search box

Type the important words: `tricolor rat terrier`

Put exact words in quotes: `"rat terrier"`

Type OR between all the words you want: `miniature OR standard`

Put a minus sign just before words you don't want:  
`-rodent, -"Jack Russell"`

Put 2 periods between the numbers and add a unit of measure:  
`10..35 lb, $300..$500, 2010..2011`

Then narrow your results by...

language:

any language

Find pages in the language you select.

region:

any region

Find pages published in a particular region.

last update:

anytime

Find pages updated within the time you specify.

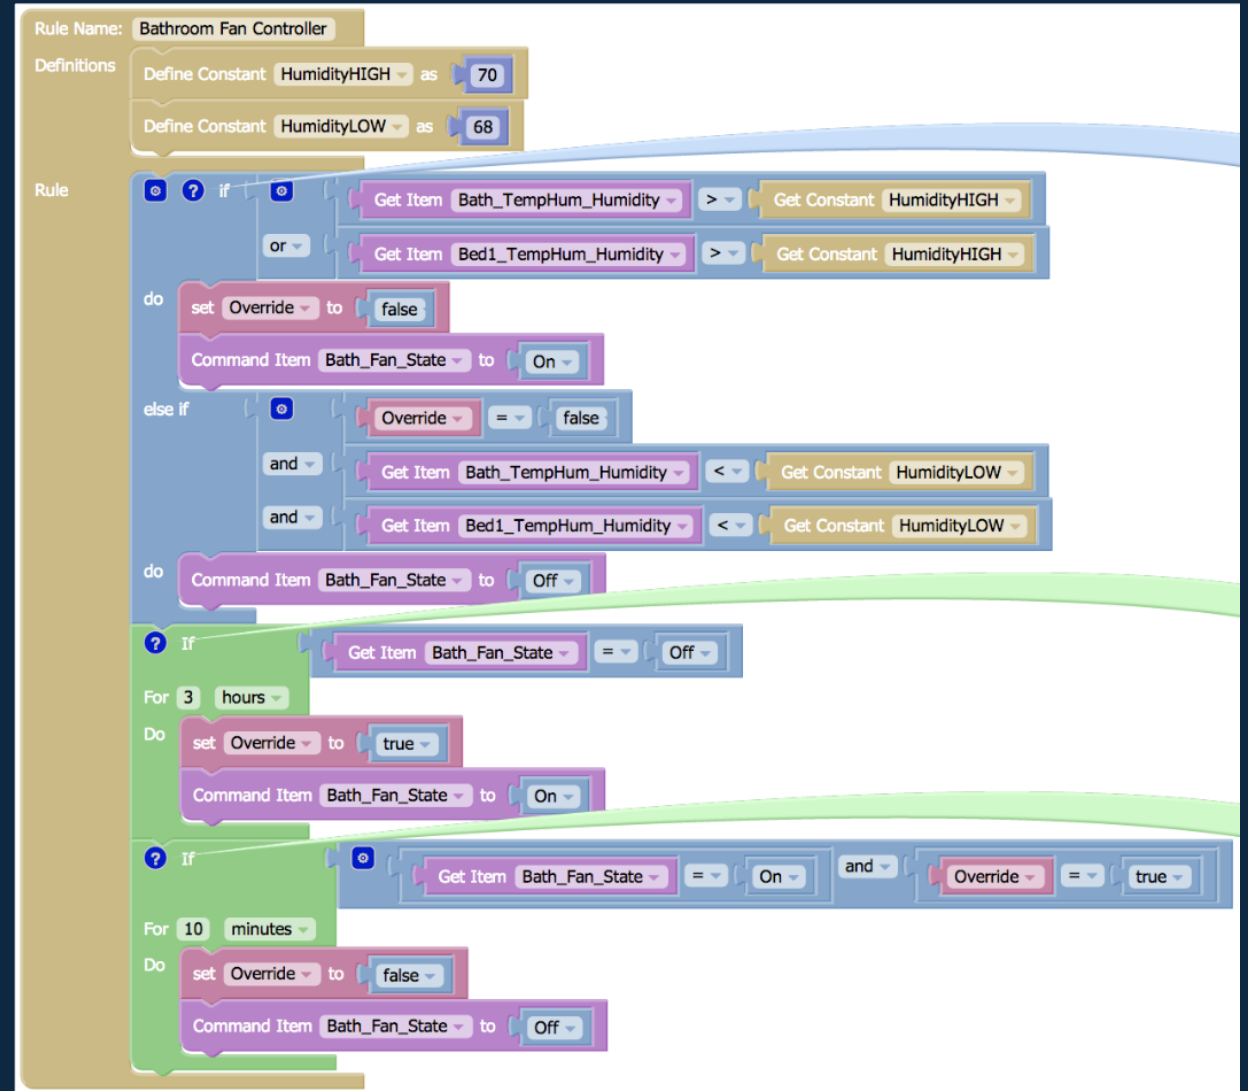

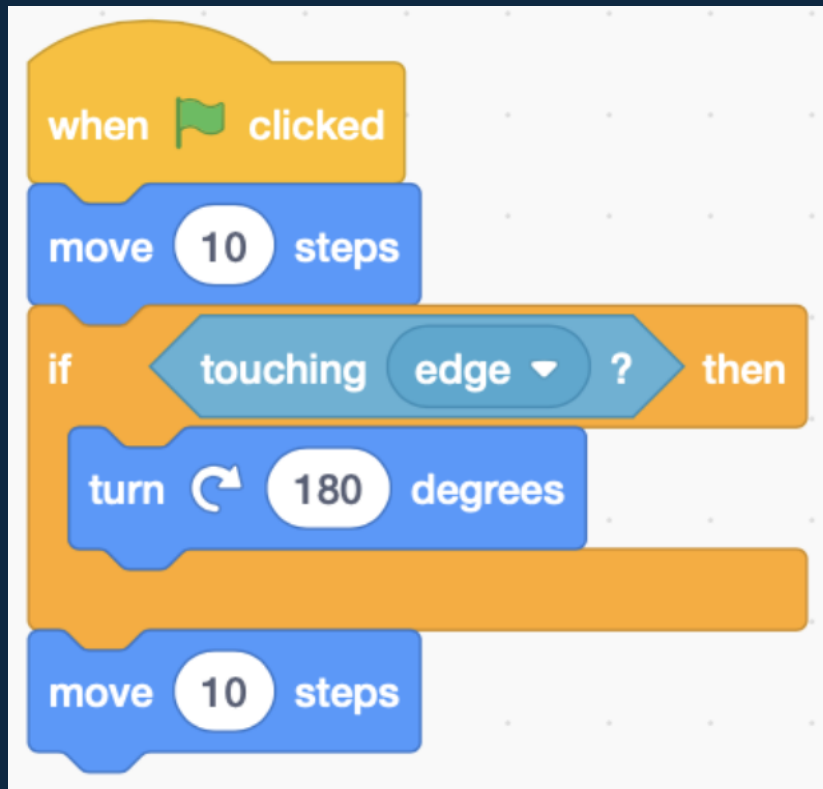

# Abstraction Floor: Java vs. Python

```
print("Hello World!")
```

```
package org.example.test1;

class Test
{
    public static void main(String []args)
    {
        System.out.println("Hello World!");
    }
};
```

# Low Abstraction Ceiling: Block-based Programming

# Diffuseness

## How many things are there to learn?

### Java Language Keywords

Here is a list of keywords in the Java programming language. You cannot use any of the following as identifiers in your programs. The keywords `const` and `goto` are reserved, even though they are not currently used. `true`, `false`, and `null` might seem like keywords, but they are actually literals; you cannot use them as identifiers in your programs.

<code>abstract</code>	<code>continue</code>	<code>for</code>	<code>new</code>	<code>switch</code>
<code>assert***</code>	<code>default</code>	<code>goto*</code>	<code>package</code>	<code>synchronized</code>
<code>boolean</code>	<code>do</code>	<code>if</code>	<code>private</code>	<code>this</code>
<code>break</code>	<code>double</code>	<code>implements</code>	<code>protected</code>	<code>throw</code>
<code>byte</code>	<code>else</code>	<code>import</code>	<code>public</code>	<code>throws</code>
<code>case</code>	<code>enum****</code>	<code>instanceof</code>	<code>return</code>	<code>transient</code>
<code>catch</code>	<code>extends</code>	<code>int</code>	<code>short</code>	<code>try</code>
<code>char</code>	<code>final</code>	<code>interface</code>	<code>static</code>	<code>void</code>
<code>class</code>	<code>finally</code>	<code>long</code>	<code>strictfp**</code>	<code>volatile</code>
<code>const*</code>	<code>float</code>	<code>native</code>	<code>super</code>	<code>while</code>

# Consistency

## How much can you infer from what you already know?

Attribute	Type	Default	Description
<code>answers-name</code>	string	—	Variable name to store data in. Note that this attribute must be provided if <code>base</code> is provided.
<code>weight</code>	integer	1	Weight to use when computing a weighted average.
<code>correct-answer</code>	string	special	Correct answer for grading. Defaults to <code>data["correct-answer"]</code> . If <code>base</code> is provided, then this answer must be a valid integer in the range [0, base).
<code>label</code>	text	—	A prefix to display before the input box (e.g., <code>label="Answer:"</code> ).
<code>suffix</code>	text	—	A suffix to display after the input box (e.g., <code>suffix=" (0-1000)"</code> ).
<code>display</code>	"block" or "inline"	"inline"	How to display the input field.
<code>remove-leading-trailing</code>	boolean	false	Whether or not to remove leading and trailing blank spaces from the input.
<code>remove-spaces</code>	boolean	false	Whether or not to remove blank spaces from the input.
<code>allow-blank</code>	boolean	false	Whether or not an empty input box is allowed. By default, an empty input box is considered an error.
<code>ignore-case</code>	boolean	false	Whether or not to enforce case sensitivity (e.g. "hello" vs "HELLO").
<code>normalize-to-ascii</code>	boolean	false	Whether non-English characters (accents, non-latin characters) are converted to their ASCII equivalents.
<code>placeholder</code>	text	None	Hint displayed inside the input box describing the expected input.
<code>size</code>	integer	35	Size of the input box.
<code>show-help-text</code>	boolean	true	Show the question mark at the end of the input display.

Attribute	Type	Default	Description
<code>answers-name</code>	string	—	Variable name to store data in. Note that this attribute must be provided if <code>base</code> is provided.
<code>weight</code>	integer	1	Weight to use when computing a weighted average.
<code>correct-answer</code>	string	special	Correct answer for grading. Defaults to <code>data["correct-answer"]</code> . If <code>base</code> is provided, then this answer must be a valid integer in the range [0, base).
<code>allow-blank</code>	boolean	false	Whether or not an empty input box is allowed. By default, an empty input box is considered an error.
<code>blank-value</code>	integer	0 (zero)	Value to be used as an answer if element is left blank.
<code>label</code>	text	—	A prefix to display before the input box (e.g., <code>label="Answer:"</code> ).
<code>suffix</code>	text	—	A suffix to display after the input box (e.g., <code>suffix=" (0-1000)"</code> ).
<code>base</code>	integer	10	The base used to parse and represent the answer, or the number of possible answers.
<code>display</code>	"block" or "inline"	"inline"	How to display the input field.
<code>size</code>	integer	35	Size of the input box.
<code>show-help-text</code>	boolean	true	Show the question mark at the end of the input display.
<code>placeholder</code>	string	-	Custom placeholder text. If not set, defaults to "integer".
<code>show-score</code>	boolean	true	Whether to show the score badge next to this element.

14					

# Viscosity

## Resistance to change

```
def numToLetter(x):  
    if (x == 1)  
        return "A"  
    if (x == 2)  
        return "B"  
    if (x == 3)  
        return "C"  
    if (x == 4)  
        return "D"  
    ...
```

- Suppose you want to change the name of “x”
- Suppose you want to add a 2nd parameter to “numToLetter”

# Viscosity

## Resistance to change

```
def numToLetter(x):  
    if (x == 1)  
        return "A"  
    if (x == 2)  
        return "B"  
    if (x == 3)  
        return "C"  
    if (x == 4)  
        return "D"  
    ...
```

### Repetition Viscosity:

- The same change must be repeated over and over
- Usually caused by redundancy

### Knock-on Viscosity:

- One change triggers a series of follow-up changes
- Usually caused by coupling

# Other Notable Cognitive Dimensions

## Error-proneness

- How “easy” is it for users to make mistakes?

## Secondary Notation

- Can users “escape” your design (e.g. via comments)?

## Premature Commitment

- Do users need to make uninformed decisions?

... (see paper for the rest)
